

Software Development

Project:

The life cycle of the vehicle is 3 years, while the electronic changes every year.

The challenge is to define the way to make both worlds coexist with each other, establishing processes to agile development methods and the possibility to introduce software modifications (based on cloud) one year before the launch of the vehicle.

Studies:

- Computing/ Electronic/Telecommunications

Languages:

- English [C1 Level]

Competencies:

- Minimum Software Architecture knowledge
- Working experience in agile environments [startups]

Valuable knowledge:

- Development APPs iOS/Android
